CITIZEN SCIENCE

Every road crossing could be blocking a river.

Help scientists map river-road crossings
using the **free AMBER Barrier Tracker**.

AMBER Barrier Tracker**

Easy to use • Available for Android & iOS

PART OF THE
EU MISSIONS
RESTORE OUR OCEAN & WATERS

Funded by
the European Union

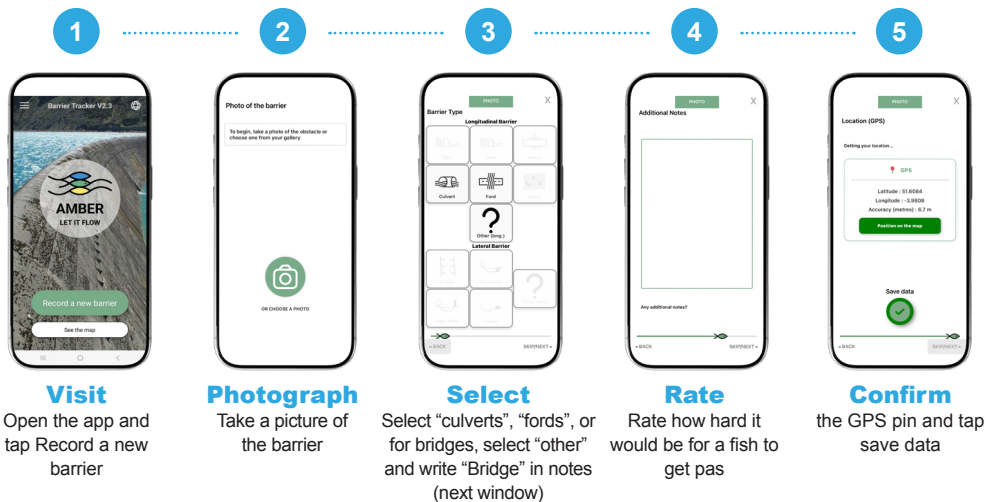

Why does it matter?

River-road crossings (RRC) are among the most common, yet least documented barriers to fish movement. Every time a road crosses a river, there is the potential for a barrier.

125,000 + river-road crossings exist across the Danube River Basin. We don't know how many block fish migration.
You can help us find out.

How to contribute

Your observation makes a difference

Every record is verified and added to the European AMBER Barrier Tracker map. Scientists, governments and restoration projects use this information to identify barriers and reconnect rivers. Every crossing you record helps improve our understanding of Europe's rivers.
